

Accurately Assessing your IT Infrastructure with the ADVIZEX ADVIZOR™

AdvizeX: Providing Expert Implementation of Virtualization Technologies and Solutions

The Benefits of the AdvizeX Advizor™

- Helps you devise a strategy to optimize your technology infrastructure
- Allows you to benchmark your capabilities across eight technology zones

Is Your Organization Ready for the Virtual Data Center?

The accelerating shift to the Virtual Data Center (VDC) is requiring organizations to rethink how traditional technology components are architected to achieve the optimal design.

The AdvizeX Advizor™ Tool

AdvizeX developed the Advizor™ tool as an application to accurately benchmark the current state of a company's technology infrastructure and identify critical gaps. The Advizor™ evaluates the customer's current environment based on over 600 weighted characteristics. The characteristics and weights are continuously being refined and updated to provide customers with the most current perspective. With more than 400 person-years of experience, no other tool is as accurate in benchmarking technology infrastructure.

Successfully Transforming Infrastructures

Technology is playing an increasingly critical role in providing customers new capabilities and improving the bottom-line. Making the correct decisions is critical when architecting your infrastructure to support new business initiatives. Success requires perspectives from experienced resources that have optimized the data center with established vendors such as VMware, EMC, HP, Cisco, and others. This proven technical expertise also comes with an eye toward operations and the bottom line. It all starts with a plan. Let the professionals from AdvizeX transform your technology infrastructure.

8 Key Building Blocks of the Virtual Data Center - Analyzed by *The AdvizeX Advizor*

Applications	Virtualization	Platforms	Storage
Networking	Business Continuity	Backup & Recovery	Security

The Advisor™ Tool Helps Assess Cloud Readiness

There's a lot of talk about clouds today. The ability to utilize technology resources in a scalable and abstracted fashion where software and information are available to users as an on-demand service offering can be compelling. It is also not simple. There are a lot of components that must be considered in order to ensure a successful cloud implementation, and every company looking at cloud technologies is unique. It takes a thoughtful plan—and the expertise to deliver.

Clouds Are About More Than Just Virtual Servers

You may already have had success with virtualization or networked storage, but in order to implement an effective cloud infrastructure, you must consider all eight major building blocks of the virtual data center working together as a system.

Cloud Readiness Planning from AdvizeX

Cloud Readiness Planning is more than a one-size-fits-all boilerplate strategy document, but rather a proven methodology that generates an actionable plan customized for your organization—so you get what you need, when you need it. Proper planning starts with information discovery before you see a quote or statement of work. Cloud Readiness Planning begins with a Discovery Session where together we:

- Define the cloud: terminology, goals, and the 8 infrastructure building blocks
- Assess client's current cloud readiness and desired implementation timelines
- Establish a three year plan with actionable steps implementable in phases
- Plan and execute required engineering tasks and business processes
- Determine project schedule and scope for products and service engagements

Technically Qualified—Financially Focused

In the enterprise cloud the technical details matter—but so does the business. Balancing these perspectives requires experienced resources that have made clouds work with established vendors such as VMware, EMC, HP, Cisco, and others. This proven technical expertise also comes with an eye to the operation and the bottom line. It all starts with a plan. Let the consultants from AdvizeX make cloud technology work for you.
