

Expert Implementation of Enterprise NETWORKING SOLUTIONS

AdvizeX: Providing Optimized Networks for Virtualization and Cloud Infrastructure

AdvizeX's team of network specialists, solution architects and skilled consultants bring an average of 20 years of experience to each networking program. Their vast knowledge base allows for expert consulting in reducing total cost of ownership around network infrastructures, as well as simplification of network complexity while increasing network performance.

Changing Network Dynamics

The powerful industry momentum towards virtualization and cloud computing means that the next generation of enterprise data networks will need to be even more robust. In order to support this growing momentum, traditional hierarchical network design is giving way to flatter architectures which favor high performance server-to-server connections. These newer designs provide better support for virtualized data centers and also go a long way in reducing cost and complexity. In addition, federated applications such as SAP and Microsoft Exchange Server are also requiring a higher level of network performance. In this emerging environment, companies need networking solutions that will reduce complexity, optimize service performance and, at the same time, keep operating costs low.

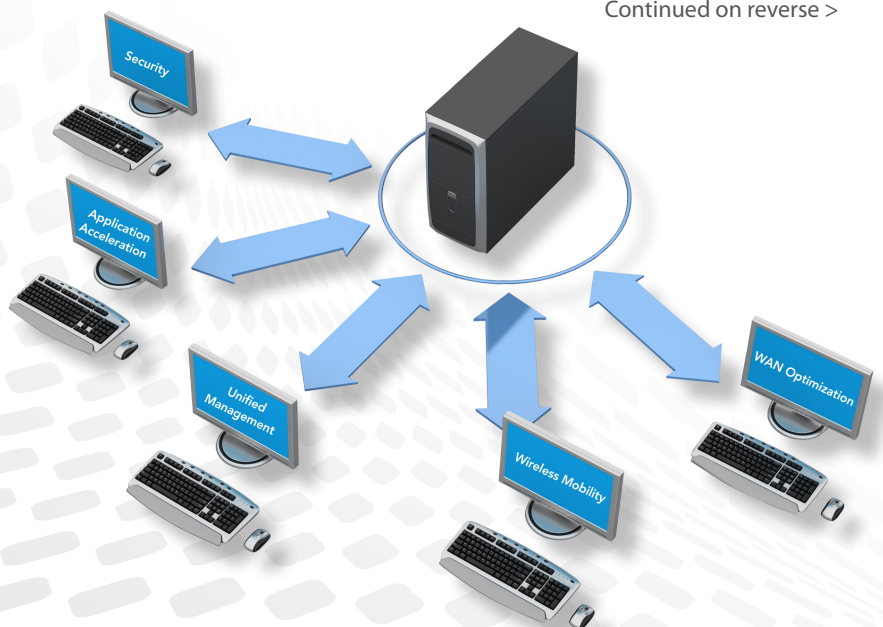

Other technology changes are also putting pressure on the network which – along with servers, storage and applications – is one of the four essential building blocks of today's IT infrastructure. Because of its essential role, the resiliency and availability of the network becomes every bit as important to sustaining mission critical applications as computing infrastructure itself.

AdvizeX Networking Expertise

Providing Advanced Networking Services Across:

- ⊕ **Network Security**
- ⊕ **Application Acceleration**
- ⊕ **Unified Management**
- ⊕ **Wireless Mobility**
- ⊕ **WAN Optimization**

The AdvizeX approach is comprehensive and includes planning, implementation and post-migration support for your network. Our solutions are custom-tailored to address the specific needs of your networking environment.

The networking experts at AdvizeX can assess your network performance by evaluating current LAN, WAN or Storage Area Networking configurations, identifying potential bottlenecks, and looking for areas that would benefit from the latest networking innovations.

Companies are facing additional challenges because both the number of network endpoints, along with the types of devices and applications that must be supported, is increasing dramatically. These additional devices may include smartphones, tablet PCs, that require access to bandwidth-intensive applications across various social media sites and YouTube.

A Unified Approach to the Streamlined Infrastructure

As you consider available options for future-proofing your network infrastructure, AdvizeX can help. We'll work on optimizing your network to support the low latency and high performance needed in today's rapidly evolving environments. Drawing on the rich array of solution sets available through longstanding partnerships with the industry's leading networking technology providers, our team of experts provides clients with sophisticated and well-architected solutions that allow organizations to maximize network availability and efficiency while controlling the total cost of ownership. Supported by deep expertise in enterprise networking, AdvizeX offers a wide array of solutions ranging from LAN switching to secure WAN routing platforms to integrated 802.11 WLAN offerings and unified communications. Our comprehensive unified approach to streamlining infrastructures, coupled with best-of-breed security systems and AdvizeX consultant management, provides a balanced fusion that produces optimal results.

AdvizeX— Providing a Holistic Approach to Network Diagnostics

The AdvizeX approach is by no means limited to point solutions from our partners. AdvizeX experts assess network performance by evaluating current LAN, WAN or Storage Area Networking configurations, identifying potential bottlenecks, and looking for areas that would benefit from the latest networking innovations. This comprehensive approach includes planning, implementation and post-migration support, customized and tailored to address the specific needs of your network environment.

Whether you're considering a network refresh, planning for a virtualized data center, or simply adding point solutions to address performance bottlenecks, AdvizeX experts can help. To find out more about how we can assist with your efforts, contact a networking consultant at AdvizeX and put their knowledge and experience to work for you. Call us today at 800-220-8454 or visit our web site at www.advizex.com.
